SLALOM CONSULTING: Women in Business and Technology
Thursday 26th March 2019

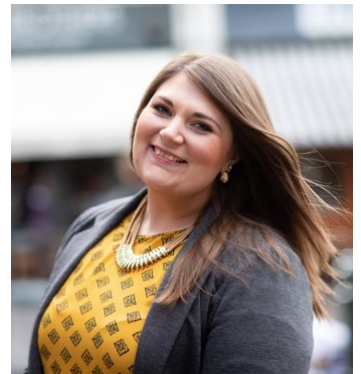

Annie Gardner, Managing Director

I have worked in the world of Management Consultancy for over 25 years where I have served a number of large organisations and public sector bodies, many of whom are high street names. Examples include helping code an automated trading system for a Stock Exchange, helping implement the technology required for a high street supermarket to launch a loyalty card scheme and helping local public bodies save millions of pounds through changing how they buy goods and services. At the weekends, I am often found at the side of a football pitch watching my three teenage boys play soccer (all three are goalkeepers!).

Sarah Bartlett, BI & Analytics Consultant

I have been working in data/analytical roles for over 10 years, of which the last five years have been spent working with Tableau. I currently work for Slalom, where I work with clients to help them become more data-driven. I am a Tableau Social Ambassador and co-leader of the London Tableau User Group. I regularly build and publish data visualisations to my Tableau Public portfolio covering a diverse range of topics. I was a finalist in the 2018 European Tableau 'Iron Viz' competition and the experience inspired me to establish 'Iron Quest'; a monthly data visualisation challenge designed to prepare participants for the Iron Viz feeder competitions and help them to practice and refine their data visualisation skills.

Emily Brown, Analyst

I have been an analyst at Slalom since August 2019, where I am experiencing different consulting practices within the company in order to decide where I would most like to align. Prior to this, I worked for four years in account management within the medical education industry which educates health care professionals in best in class treatments and patient care. I gained a BSc in Biomedical Sciences from Durham University, where I also supported the students' union and volunteered with the elderly in the local community. I have lived in London for over four years and love making the most of what the city has to offer.

Maja Zezelj, Consultant

Figuring out the how of the wow has been a passion ever since I can remember. I've pursued that passion and got a Masters degree in Information Systems from University of Organization and IT (in Croatia). Since graduation, 12 years ago, I have been helping companies across the world to solve complex problems using my knowledge of technology and business. In a nutshell, today I apply the wow and the how to come up with solutions that make a difference.
